Preface

The National Employment Office (NEO) regularly publishes its most common statistics. Extensive data on the NEO's most substantial missions are published on its website on a monthly basis. Apart from these tables, the NEO also publishes a monthly commentary on the evolution of unemployment benefits and of career break and time credit schemes based on our payment statistics. Furthermore, the NEO composes a detailed annual report. This consists of a volume on our activities, as well as a substantial statistical volume, describing all schemes that are a part of the NEO's missions (partial and full unemployment, career break and time credit...).

Our brochure called the 'Quarterly Indicators of the Labour Market', however, contains the most recent quarterly data on the NEO's missions. It also provides data on a number of external economical indicators, allowing us to view our data in a larger context, and some elements for comparing Belgian unemployment to European trends. Publishing these data on a quarterly basis enables us to detect trends for these schemes and for the labour market at large at a faster rate than is possible in the context of a yearly report. At the same time, the impact of seasonal or technical effects is softened when compared to monthly statistics. If possible, all data in the 'Quarterly indicators' are published as a series containing the five most recent years. In this way, the NEO hopes to put the most recent numbers in a larger context.

Since the mentioned publications are only being made available in Dutch and French, this abbreviated English version of the 'Quarterly Indicators' was devised in order to enable a larger international public to take note of its contents. Relevant metadata and mention of sources, however, are only provided in the detailed versions in French or Dutch. The English publication contains a summary of the most important trends observed in the brochure, as well as the statistical series containing all quarterly and yearly data on the indicators used for this analysis. The summary of the last edition of each year will focus on the yearly rather than the quarterly data. In this way, the NEO strives to contribute to the analysis and progress of our labour market.

Summary of observations

Fully unemployed benefit recipients seeking work (FUBR-SW)

The number of fully unemployed benefit recipients seeking work (FUBR-SW) remained stable in Q3 2024. On average there were 285,378 FUBR-SW. Compared to Q3 2023, this is a stabilisation (-0.1%; 1,199 units).

Chart: Variation of the number of FUBR-SW on an annual basis

Between Q3 of 2023 and Q3 of 2024 we observe:

- increasing numbers of FUBR-SW in the Walloon Region by 1.0% and in the Brussels Capital Region by 0.8%, but a decrease by 1.5% in the Flemish Region. In Q3 2024 we observe 120,441 FUBR-SW in the Flemish Region, 61,308 in the Walloon Region and 103,628 in the Brussels Capital Region;
- an increase by 1,4% of male FUBR-SW, but a decrease by 2,2% of female FUBR-SW;

- an increase of FUBR-SW for the age class of < 25 years old (-9,5%) en the age class of 60 years old or more (-3,2%), but an increase for the age class of 25-49 years old (+8,5%) en the age class of 50-59 years old (+2,1%).

Fully unemployed benefit recipients not seeking work (FUBR-NSW)

The average number of unemployed not seeking work went from 11,255 in Q3 2023 to 7,865 in Q3 2024. This is a decrease amounting to -30.1% on an annual basis. This evolution is largely to be explained by regulatory reforms in the years 2015 and 2017, related to the age limits for requesting an exemption from registering as a jobseeker, as well as consecutive reforms of the scheme of unemployment with company bonus (namely the raising of age and career length requirements). Furthermore, their evolution is influenced by the effects of the babyboom generation reaching retirement age. Since the 1st of January 2019, the unemployed with company bonus can also opt for an early retirement before reaching the age of 65.

For the exempted elderly unemployed, we observe a decrease by 40.5% or -63 units. For the exempted unemployed with company bonus we observe a decrease by 38.1%: between Q3 2023 and Q3 2024, their number evolved from 8,441 to 5,221 (-3,220).

Influenced by these different factors, the total number of unemployed benefit recipients (seeking work or not and including the unemployed with a company bonus) in Q3 2024 amounts to 293,243 units, which is a decrease by 1.3% on an annual basis.

Partial unemployment

On average, partial unemployment amounted to 133,367 payments per month, which corresponds to 26,198 budgetary units (+/- full time equivalents). We observe a decrease of the number of partially unemployed (-6.6%) on an annual basis.

Of course, in observing these numbers, we need to account for a combination of various factors: on average, since the pandemic, we have seen fewer companies than before rely on partial unemployment, but for an average larger number of employees. Here we see the effect of an uncertain economy that does not affect all companies equally, but also that of the regulatory change regarding the eligibility conditions since the end of the pandemic. However, for a number of sectors we also see structurally higher utilization than before, as the system has become better known.

Career break, time-credit and thematic leaves

In Q3 2024 we observe a stabilization (+0.7%) on an annual basis for the total number of benefit recipients taking a career break, time-credit or thematic leave (parental leave, leave for medical assistance, leave for palliative care or leave for informal care).

The number of benefits for employees interrupting their work through the time-credit scheme dropped by -3.8% on an annual basis (-3,409 units).

For the career break scheme, we observe a decrease as well on an annual basis (-6.0%). This evolution is partially a consequence of the transfer of competences to the Flemish government since September 2nd 2016. Since then, there have been no new entries in the career break scheme for this region.

The thematic leaves show an increase (+6.3%) of the number of benefit recipients compared to Q3 2023. The evolution of thematic leaves is mainly influenced by that of parental leave, the largest scheme.

Income Guarantee Benefit (IGB)

The total number of payments for the Income Guarantee Benefit (IGB) for part time workers has dropped by 11.0% on an annual basis. Since 2015, the numbers of IGB have decreased sharply in the wake of regulatory changes that took effect in 2015 concerning the computation of benefit amounts and allowance conditions.

Observed labour market indicators

Q3 2024 is characterized by indicators painting a mixed picture. The economic growth on a quarterly basis is favorable by +0.2%.

Most labor market indicators show a negative trend. We see decreases for the number of job offers and the hours of agency work performed each day. The number of jobs lost due to bankruptcy and the number of collective dismissals announced rose. Furthermore, we observe an increase of short-term unemployment.

On the other hand, however, we observe a more favorable evolution of the creation of enterprises, partial unemployment and youth unemployment.
